I am a MERN Stack developer with expertise in TypeScript, JavaScript, and Node.js. I build scalable, high-performance applications and integrate RESTful APIs for seamless front-end and back-end communication. With a strong background in React and GraphQL, I create dynamic, data-driven interfaces that enhance user experiences. My approach is customer-centric and analytical, focusing on reliability, performance, and observability throughout the software development life cycle.

WORK EXPERIENCE:

Associate Backend Developer, On-demand Delivery App | Fab Bud 03/2023 – 12/2024

- Developed and maintained high-performance applications using Typescript, JavaScript, and Node.js, contributing to scalable and efficient software solutions.
- Built interactive and dynamic user interfaces with React and GraphQL, improving user engagement and data management.
- Integrated multiple APIs, including RESTful services, to streamline data flow between front-end and back-end systems, enhancing overall application functionality.

Backend Developer, On-demand Delivery App (Intern) | Fab Bud 11/2022 – 02/2023

- Managed all stages of the software development life cycle, including building, testing, deploying, and operating applications in production.
- Communicated effectively in English and collaborated with product, design, and engineering groups, contributing to a cohesive and efficient development process.

Digital Marketing Lead | Durbarmart.com, Ecom 01/2022 – 09/2022

- Applied overall SEO tools to reach the goal of 50 000 visitors and 1 million impressions on Google.
- Demonstrated an entrepreneurial, analytical, and customer-centric approach by focusing on improving UX through data-driven insights and innovative solutions.
